NEUROWORSENING

Neuroworsening*: (○ No	O Yes	Unknown		

- *Neuroworsening is defined as:
- 1. A spontaneous decrease in the Glasgow Coma Scale motor score ≥2 points (compared with the previous examination), or
- 2. A new loss of pupillary reactivity, development of pupillary asymmetry ≥2 mm, or
- 3. Deterioration in neurological or CT status sufficient to warrant immediate medical or surgical intervention.

Intermediate = Advanced

NEUROWORSENING

Neuroworsening*: No			
Yes If yes: Decrease in motorscore ≥ 2 points			
Development of pupillary abnormalities			
Other neurological and/or CT deterioration			
Action taken if yes: None			
Unscheduled CT scan			
Change in medical therapy			
Surgical intervention			
Unknown			
*Neuroworsening is defined as: 1. A spontaneous decrease in the Glasgow Coma Scale motor score ≥2 points (compared with the previous examination), or			
 A new loss of pupillary reactivity, development of pupillary asymmetry ≥2 mm, or Deterioration in neurological or CT status sufficient to warrant immediate medical or surgical intervention.
